Foam Polyethylene Insulation

presents details clearly

Dual Braid & Foil Shields

block external noise & interference

Coaxial Design

for improved dynamics

Harmony II improves the performance of entry and mid-level AV receivers, CD / DVD players, DVRs and many other components. Its dual shields and high quality Foam PE insulation block out annoying hum and maintain a low noise floor for accurate presentations. Harmony's beveled gold connectors and OFC conductors deliver the full signal and complete standard systems better than the basic cables that come with the components.

Matte Jade Green Jacket ; Diameter of 6mm (.235")
