**JANUARY 2020**

**FOR IMMEDIATE RELEASE**

## **SYMPHONY 3 INTERCONNECT**

Straight Wire has introduced SYMPHONY 3, a versatile upgrade star-quad audio interconnect. It incorporates Compressed Conductor Technology (CCT) with 4 conductors at 24 awg (American Wire Gauge) of compressed OFC Copper. Foam Hybrid TPR low dielectric insulation is employed to achieve non resonant mechanical properties and optimized electrical performance. A high coverage 90%+ copper braid shield and low resistance copper foil deliver mechanical stability and low microphonic tendencies. The cable is jacketed with a charcoal gray durable MIL SPEC soft PVC jacket.

Symphony 3 Interconnect Cable combines CCT with a modified Star Quad design that can be terminated in the field. Standard single-ended (RCA), balanced (XLR) and noise dumping telescopic terminations are available. CCT designs combine the best attributes of solid-core and stranded conductor technology.

The sonic attributes of Symphony 3 Interconnect are broad in scope and application. It conveys details with tight bass, full midrange warmth and accurate high frequency timbre and tonality. The sonic accuracy and balance mates well with most mid level components. Soundstage and instrument separation are well defined. Mid level passages offer natural sibilance and vocals are full and lush with realism.

Straight Wire has produced premium audio/video cables on a worldwide basis for over 30 years. They are recognized for product selection (over 80 lines of cable!), immediate delivery, custom lengths and termination. They have won numerous awards for performance, quality and value.
